

Using Provet Cloud REST API with Postman

Download Postman from <https://www.getpostman.com/> and open it after installing. Follow these steps to make a basic GET request to Provet Cloud REST API (check figure 1 to see the steps):

1. Make sure that you have selected GET as the request type.
2. Enter the correct request URL for your Provet Cloud system (https://provetccloud.com/<provet_id>/api/0.1/ where `provet_id` is the unique id of the Provet Cloud instance for your company).
3. Select Headers tab and add the following header:
 - Key: *Authorization*
 - Value: *Token 9097fab68f6203f5f3eb5794581a0369b99e51df*
 - Replace the actual token with your own token generated in Provet Cloud > Settings > General > Integrations > API tokens.
4. Press Send and you should get the response from Provet Cloud REST API. You can make further REST API calls to all URLs received from Provet Cloud to get additional data using your authorization token.
